## How to create a rosette in inkscape

Sept. 2014 tci

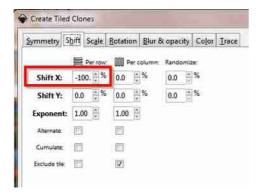

Draw a circle and move the center.

With the "Tiled Clone" tool now may the circle be duplicated.

Here's an example. With the parameters can experementieren something arise again and again new effects.

Die Get Der Leve Open Deb Jen (eing Jettermen 1969

The original circuit must now be deleted.

If the object is not marked, it can also improve the transfer found the following extent.

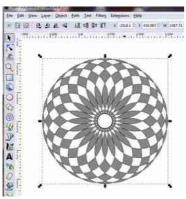

Edit -> Clone -> Select Orginal and then Delet them.

Mark all objects. The easiest way draws to a rectangle with the mouse over all the circles.

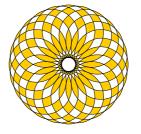

Now the "exclusion" tool can be used.

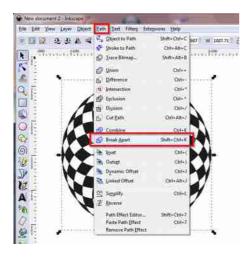

As a result now should be created a rosette with different sectors.

Now, the color can be changed. See below.

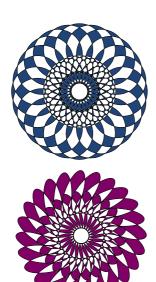

If the individual elements must get different colors yet the following steps are taken.

Makiere das ganze Obkjekt und benutze "Bracke Apart" um die Wege aufzutrennen. (Shift+Ctrl-K)

Thereafter, the individual elements can be colored.

And here two complex rosettes were created using the same method yet.
